

Priory Primary School Eco News!

This term the Eco-Committee have met and have thought about the next steps on their Eco journey. This term, they are focusing on ways in which to reduce water within the local community and would like to share with you some top tips for ways in which you could save water at home.

Eco - Challenge Save Water!

1. Switch to showers - switching from baths to showers is an easy way to save water.
2. Invest in a water butt or use cooking water in your garden.
3. Turn off the tap - running taps waste as much as 6 litres of water a minute. Remember to turn off the tap when you're brushing your teeth.
4. Make sure your dishwasher is full - switching from handwashing to dishwashing saves 6000 litres a year and not pre-rinsing your dishes before they go in saves another 1000 litres every year.
5. Fill up the kettle only as much as needed - filling up the kettle only as much as you need saves both water and energy.

Looking ahead to the next half term, the committee are looking at ways in which to develop awareness of plastic pollution and will be setting each class the challenge to make a piece of marine artwork using plastic.

This artwork will be showcased within school (details to follow).

If you have any plastic bottle lids (i.e. from milk bottles or bottles of squash) at home, please can you collect these and send these into school with your child to be use as part of the artwork.
